

METHOD AND SYSTEM OF HEMOFILTRATION FOR REDUCING
INFLAMMATORY MEDIATOR RELATED DISEASES

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method and system
for providing hemofiltration for reducing inflammatory
mediator related diseases. In one form, a hemofiltration
5 system for treating inflammatory mediator related
diseases is disclosed. The system includes a hemofilter
to receive blood from a specimen, the hemofilter removing
selective inflammatory mediators from the blood and at
least one therapeutic agent used in association with the
10 hemofilter, the therapeutic agent to reduce adverse
inflammatory mediator effects.
